Education

BSCS

University of Engineering And Technology, Lahore

Projects

Quiz Game

This project lets users test their knowledge in various subjects by choosing a topic and answering questions presented with multiple choice options. It provides feedback for each answer and displays a final score (can be modified to remove points) to gauge understanding in a fun and interactive way.

Hostel Management System

This C++ project uses OOP and data structures to create a hostel management system. It stores resident and room info, allowing staff to manage residents, room allocation, and potentially generate reports, boosting efficiency and data accuracy.

Food Mangement System

his C++ program helps manage food inventory. It uses a database to track items (names, quantities, expiry dates) and allows adding, editing, and deleting entries. This keeps track of food stock, reducing waste and ensuring meals have available ingredients. It's ideal for individuals, families, or small food businesses

Professional Experience

2024/01 – present

Freelancer

Fiverr

I'm a skilled C++ and Basic Java programmer offering various project services on Fiverr. I have experience creating C++ applications using Object-Oriented Programming (OOP) principles, ensuring well-structured and maintainable code. Additionally, I can handle basic Java projects.
