SKILLS

Primary Skills   Basic Python, SQL, Git,

Secondary Skills   MySQL, Jupiter Notebook

PROJECTS

Student Result Analysis with Python

- The analysis explores the impact of various factors such as gender, parent education, and marital status on student scores. Key findings include: the number of female students is higher than males, parent education has a significant impact on student scores, while parent marital status has negligible impact.

Sales Analysis with Python

- The analysis explores the impact of various factors such as Gender, Age Group, marital status, States, Product Category etc. Key findings include: Married women age group 25-36 from UP, Maharashtra and Karnataka Working in IT, Healthcare and Aviation are more likely to buy Products from Foods, Clothing and Electronics

Hotel Booking Analysis with Python

- This focused on hotel booking cancellations. The key findings include high cancellation rates, especially for city hotels, with price being a significant factor. The report provides recommendations to the hotels to address the issue, such as adjusting pricing strategies and improving service quality.
